

## RO Membrane General Information

- We recommend flushing for 5 minutes to prevent earlier clogging
- The first full tank of permeate should be discarded. Do not use the initial permeate for drinking water or food preparation
- Keep elements moist at all times after initial wetting
- If operating limits and guidelines given in this specification are not strictly followed, the limited warranty will be null and void
- To prevent biological growth during prolonged system shutdowns, it is recommended that membrane elements be immersed in a preservative solution
- The membrane shows some resistance to short-term attack by chlorine (hypochlorite). Continuous exposure, however, may damage the membrane and should be avoided
- The customer is fully responsible for effects of incompatible chemicals and lubricants on elements. Their use will void the element limited warranty
